Materials

Name	Company	Catalog Number	Comments
For gel electrophoresis and membrane transfer we recommend the use of XCell SureLock® Mini-Cell and XCell II® Blot Module Kit CE Mark (Invitrogen, EI0002), which is compatible with the use of the different precast minigels that are specified throughout the protocol. The brand and order number of all materials used is mentioned during the protocol. The list of enzymes used in the protocol is shown in the table below.			
Protein A Dynabeads	Invitrogen	10001D	use protein G for mouse or goat antibody
RNase I	Ambion	AM2295	activity can change from batch to batch
T4 RNA ligase I	New England Biolabs	M0204S	
PNK	New England Biolabs	M0201S	
proteinase K	Roche Group	03115828001	
Superscript III reverse transcriptase	Invitrogen	18080044	
Circligase II	Epicentre Biotechnologies	CL9021K	
FastDigest® BamHI	Fermentas	FD0054	
AccuPrime™ SuperMix I	Invitrogen	12342010	this PCR mix gives the best results in our hands
