

Appendix 1. Steps of development of computerized adaptive testing

In general, a computerized adaptive testing (CAT) is developed through 5 stages: (1) Development of an item pool, (2) Field testing of the item pool, (3) Establishment of a calibrated item bank, (4) Simulation study to determine a set of stopping rules, and (5) Development of an administration platform of the CAT.

(1) Development of an item pool.

CAT developers have to establish a pool of items by designing new items or selecting items from existing tests/scales. The item pool should include items with varied difficulty for examinees.

(2) Field testing of the item pool.

CAT developers administer the item pool to target subjects with sufficient sample size, and the subjects' level of function (or ability) should range from low to high.

(3) Establishment of a calibrated item bank.

CAT developers analyze the data of field testing using IRT software to obtain the fitness and calibrated item parameters of each item in the item pool. Thereafter, CAT developers remove the items with poor fitness from the item pool and retain or select partial items with varied item parameters to establish the calibrated item bank of the CAT.

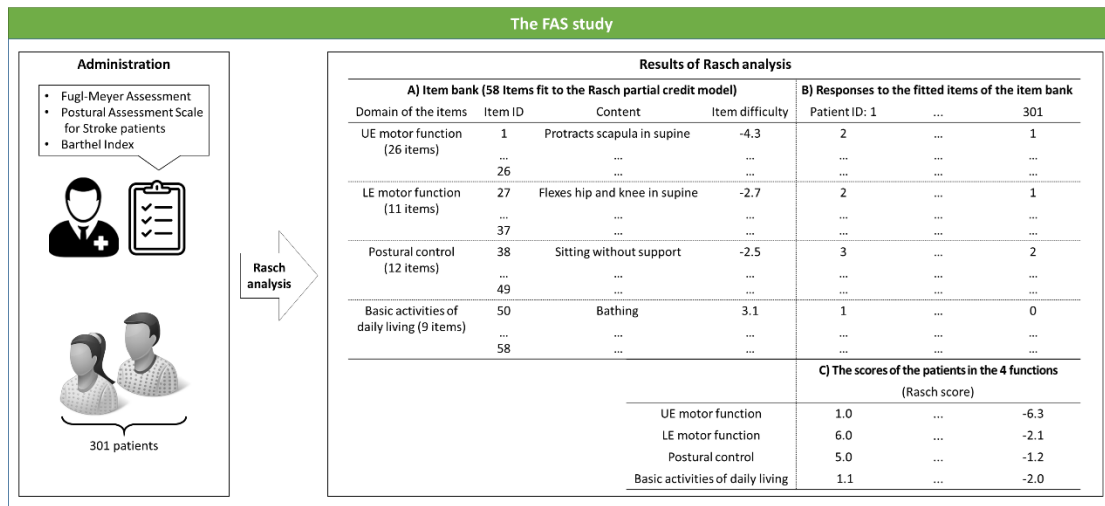

(4) Simulation study to determine a set of stopping rules

CAT developers conduct a simulation study to explore the CAT's performance (reliability and number of items administered) when the CAT adopts different sets of stopping rules. In general, the larger the number of items administered in a CAT, the higher the reliability. Therefore, CAT developers should determine a set of stopping rules with optimal balance between the reliability and the number of items administered.

(5) Development of an administration platform of CAT

CAT developers should develop a website/software/APP for administering the CAT to improve the accessibility for users.

Appendix 4. Postural Assessment Scale for Stroke patients

Postural Assessment Scale for Stroke patients

<i>Maintaining a Posture</i>				
1. Sitting without support (sitting on the edge of an 50-cm-high examination table [a Bobath plane, for instance] with the feet touching the floor)	0 cannot sit	1 can sit with slight support, for example, by one hand	2 can sit for more than 10 seconds without support	3 can sit for 5 minutes without support
2. Standing with support (feet position free, no other constraints)	0 cannot stand, even with support	1 can stand with strong support of 2 people	2 can stand with moderate support of 1 people	3 can stand with support of only 1 hand
3. Standing without support (feet position free, no other constraints)	0 cannot stand without support	1 can stand without support for 10 seconds or leans heavily on 1 leg	2 can stand without support for 1 minute or stands slightly asymmetrically	3 can stand without support for more than 1 minute and at the same time perform arm movements above the shoulder level
4. Standing on nonparetic leg (no other constraints)	0 cannot stand on nonparetic leg	1 can stand on nonparetic leg for a few seconds	2 can stand on nonparetic leg for more than 5 seconds	3 can stand on nonparetic leg for more than 10 seconds
5. Standing on paretic leg (no other constraints)	0 cannot stand on paretic leg	1 can stand on paretic leg for a few seconds	2 can stand on paretic leg for more than 5 seconds	3 can stand on paretic leg for more than 10 seconds
<i>B. Changing Posture</i>				
Scoring of items 6 to 12 is as follows (items 6 to 11 are to be performed with a 50-cm-high examination table, like a Bobath plane; items 10 to 12 are to be performed without any support; no other constraints):				
	cannot perform the activity	can perform the activity with much help	can perform the activity with little help	can perform the activity without help
6. Supine to affected side lateral	0	1	2	3
7. Supine to nonaffected side lateral	0	1	2	3
8. Supine to sitting up on the edge of the table	0	1	2	3
9. Sitting on the edge of the table to supine	0	1	2	3
10. Sitting to standing up	0	1	2	3
11. Standing up to sitting down	0	1	2	3
12. Standing, picking up a pencil from the floor	0	1	2	3

Appendix 5. Barthel Index

Barthel Index

Instructions: Choose the scoring point for the statement that most closely corresponds to the patient's current level of ability for each of the following 10 items. Record actual, not potential, functioning. Information can be obtained from the patient's self-report, from a separate party who is familiar with the patient's abilities (such as a relative), or from observation. Refer to the Guidelines section on the following page for detailed information on scoring and interpretation.

Bowels

0 = incontinent (or needs to be given enemas)
1 = occasional accident (once/week)
2 = continent

Patient's Score: _____

Bladder

0 = incontinent, or catheterized and unable to manage
1 = occasional accident (max. once per 24 hours)
2 = continent (for over 7 days)

Patient's Score: _____

Grooming

0 = needs help with personal care
1 = independent face/hair/teeth/shaving (implements provided)

Patient's Score: _____

Toilet use

0 = dependent
1 = needs some help, but can do something alone
2 = independent (on and off, dressing, wiping)

Patient's Score: _____

Feeding

0 = unable
1 = needs help cutting, spreading butter, etc.
2 = independent (food provided within reach)

Patient's Score: _____

Transfer

0 = unable – no sitting balance
1 = major help (one or two people, physical), can sit
2 = minor help (verbal or physical)
3 = independent

Patient's Score: _____

Mobility

0 = immobile
1 = wheelchair independent, including corners, etc.
2 = walks with help of one person (verbal or physical)
3 = independent (but may use any aid, e.g., stick)

Patient's Score: _____

Dressing

0 = dependent
1 = needs help, but can do about half unaided
2 = independent (including buttons, zips, laces, etc.)

Patient's Score: _____

Stairs

0 = unable
1 = needs help (verbal, physical, carrying aid)
2 = independent up and down

Patient's Score: _____

Bathing

0 = dependent
1 = independent (or in shower)

Patient's Score: _____

Total Score: _____

(Collin et al., 1988)

Scoring:

Sum the patient's scores for each item. Total possible scores range from 0 – 20, with lower scores indicating increased disability. If used to measure improvement after rehabilitation, changes of more than two points in the total score reflect a probable genuine change, and change on one item from fully dependent to independent is also likely to be reliable.

Item of the CAT-FAS

FM-UE subset

1. Shoulder retraction
2. Shoulder elevation
3. Shoulder abduction
4. Shoulder external rotation
5. Elbow flexion
6. Forearm supination
7. Shoulder adduction/internal rotation
8. Elbow extension
9. Forearm pronation
10. Hand to lumbar spine
11. Shoulder flexion 0° to 90°
12. Elbow 90° pronation/supination
13. Shoulder abduction 0° to 90°
14. Shoulder flexion 90° to 180°
15. Elbow 0° pronation/supination
16. Elbow 90° wrist stability
17. Elbow 90° wrist flexion/extension
18. Elbow 0° wrist stability
19. Elbow 0° wrist flexion/extension
20. Circumduction
21. Hand, mass extension
22. Hook grasp
23. Lateral prehension
24. Palmar prehension
25. Cylinder grip
26. Spherical grip

FM-LE subset

27. Hip flexion, supine
28. Knee flexion, supine
29. Hip extension, supine
30. Hip adduction, supine
31. Knee extension, supine
32. Ankle plantar flexion, supine
33. Knee flexion, sitting
34. Ankle dorsiflexion, sitting

35. Knee flexion to 90°, standing
 36. Ankle dorsiflexion, standing
 37. Heel to opposite knee, time
-

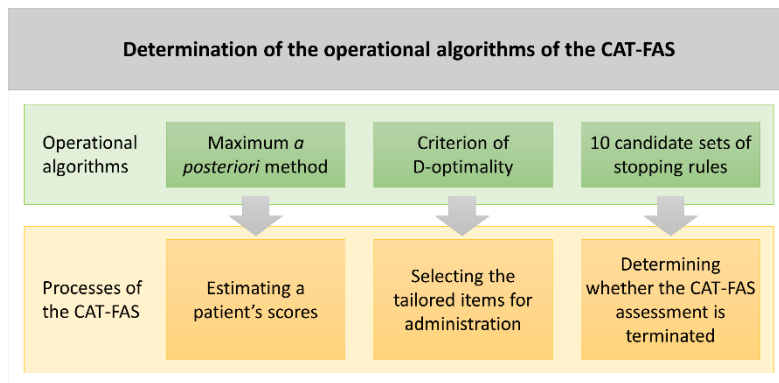

PASS subset

38. Sitting without support
 39. Standing with support
 40. Standing without support
 41. Standing on unaffected leg
 42. Standing on paretic leg
 43. Supine to affected side lateral
 44. Supine to unaffected side lateral
 45. Supine to sitting up on the edge of the table
 46. Sitting on the edge of the table to supine
 47. Sitting to standing up
 48. Standing up to sitting down
 49. Standing, picking up a pencil from floor
-

BI subset

Appendix 7. Determination of the operational algorithms of the CAT-FAS

Appendix 8. 10 candidate sets of stopping rules

10 candidate sets of stopping rules

Reaching limited reliability increase (LRI) criterion

1 LRI < 0.001

2 LRI < 0.005

3 LRI < 0.010

4 LRI < 0.015

5 LRI < 0.020

Reaching either LRI criterion or threshold of reliability

6 LRI < 0.001 or Rasch reliability \geq 0.90

7 LRI < 0.005 or Rasch reliability \geq 0.90

8 LRI < 0.010 or Rasch reliability \geq 0.90

9 LRI < 0.015 or Rasch reliability \geq 0.90

10 LRI < 0.020 or Rasch reliability \geq 0.90

Appendix 9. Screenshot of the software conducting simulation of the CAT-FAS

The screenshot displays the MATLAB R2015a environment. The main window shows a script with the following code:

```
92 - for n=1:NCase
93 -     for i=1:NItem
94 -         % item selection
95 -         PItemSelect=ceil(NItem,1);
96 -         PItemSelect(Pwcell(NItem,1));
97 -         InfIt=nan(NDim,NDim, NItem);
98 -         InfItSel=nan(NDim,NDim, NItem);
99 -         EItSel=nan(NDim,1, NItem);
100 -
101 -         for k=1:NItem
102 -             BBPtemp=nan(NDim,NDim, NCategory(k));
103 -             PItemSelectUP(k)=exp(ScoringMatrix(k)*T(:,i,n)+DesignMatrix(k)*ItemParameter(k));
104 -             PItemSelect(k)=PItemSelectUP(k)/sum(PItemSelectUP(k));
105 -             EItSel(:,k)= ScoringMatrix(k)*PItemSelect(k);
106 -             for q=1:NCategory(k)
107 -                 BBPtemp(:,:,q)= BBMatrix(k)(:,:,q)*PItemSelect(k,q,1);
108 -             end
109 -             BBPMatrix(k)=sum(BBPtemp,3);
110 -             InfIt(:,:,k)= BBPMatrix(k)- EItSel(:,k)* EItSel(:,k)+inv(PriorVarCov);
111 -             InfItSel(:,k)=InfIt(:,k)+CumulInfo(:,i,n);
112 -             %EItSel(:,k)=EItSel(:,k)+EItSel(:,k);
113 -
```

The Command Window shows the output: "New to MATLAB? See resources for Getting Started" and "58". The Command Prompt shows "fx >>". The Workspace window on the right lists the following variables:

- BBMatrix
- BBPMatrix

Appendix 10. Screenshot of the development of the online administration platform of the CAT-FAS

The screenshot displays the CAT-FAS administration platform interface on the left and its corresponding developer tools on the right. The interface features a dark sidebar with navigation options: "User Management", "Unit Management", "Data Management", and "admin Logout". The main content area is titled "Information" and contains a paragraph: "Simultaneously assess 4 functions in patients with stroke, including motor functions of upper and lower extremities, postural control, and basic activities of daily living". Below this are three management cards: "User Management" (Add, edit, and delete user/administrator), "Unit Management" (Add, edit, and delete unit of user), and "Data Management" (Add, edit, delete, administer, and review data). Each card has a blue "Enter" button. A footer at the bottom reads "Copyright (c) 2017 Billy Shih All Rights Reserved."

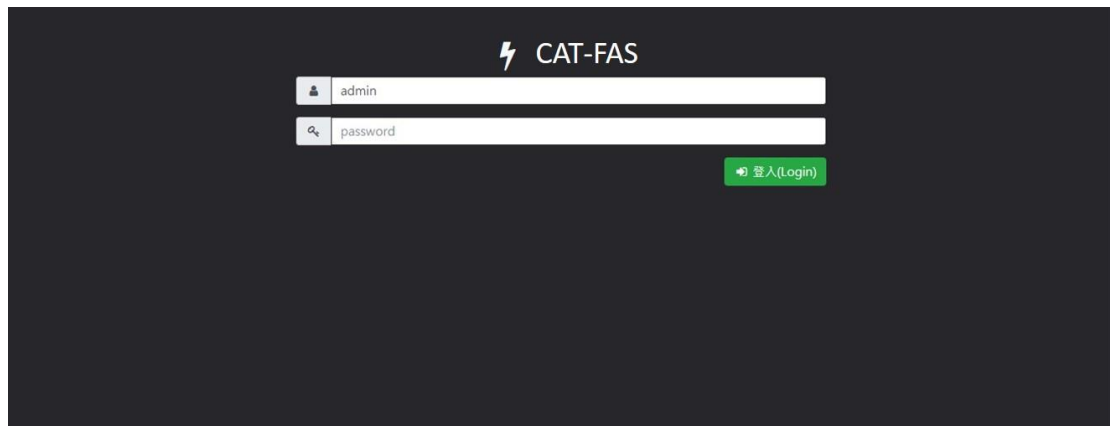

The developer tools on the right show the "Elements" panel with the following HTML structure:

```
<!doctype html>
<html>
  <head>...</head>
  <body>
    <!-- BEGIN navbar -->
    <nav class="navbar navbar-dark bg-dark navbar-expand-lg">
    <!-- End navbar -->
    <!-- Begin Content -->
    <div class="container" id="content">...</div>
    <!-- BEGIN Footer -->
  </nav class="navbar navbar-dark bg-dark navbar-fixed-bottom hidden-sm" role="navigation">...</div>
  <!-- END footer -->
  <script>...</script>
</body>
</html>
```

The "Styles" panel shows the following CSS rules for the selected element:

```
Filter: show .cls +
element.style { }
.bg-dark {
  background-variant: scss:4;
  background-color: #343a40 !important;
}
.navbar {
  position: relative;
  display: flex;
  flex-wrap: wrap;
  flex-direction: column;
  align-items: center;
  justify-content: space-between;
  padding: 0.5rem 1rem;
}

Appendix 12. Home page of the CAT-FAS

The screenshot displays the home page of the CAT-FAS system. At the top, a dark navigation bar contains the text 'CAT-FAS' followed by links for 'User Management', 'Unit Management', and 'Data Management'. On the right side of this bar is a green 'admin Logout' button with a small icon. Below the navigation bar is a large grey box titled 'Information' containing the text: 'Simultaneously assess 4 functions in patients with stroke, including motor functions of upper and lower extremities, postural control, and basic activities of daily living'. Underneath this are three white boxes with grey headers: 'User Management' (with subtext 'Add, edit, and delete user/administrator' and an 'Enter' button), 'Unit Management' (with subtext 'Add, edit, and delete unit of user' and an 'Enter' button), and 'Data Management' (with subtext 'Add, edit, delete, administer, and review data' and an 'Enter' button'). A dark footer bar at the bottom contains the text 'Copyright (c) 2017 Billy Shih All Rights Reserved.'
